

**MARKED-UP VERSION OF THE AMENDMENTS**

**IN THE SPECIFICATION**

The paragraph beginning on pg. 12, line 6 and ending on pg. 12, line 14 has been amended as follows:

[Instead of] Rather than the earth plate 75 of the DC motor according to the sixth embodiment shown in Fig. 7, a conductive washer 81 is disposed between the bearing and a collar 9d formed on the shaft 9. The washer 81 has a pair of spring arms [81] 81a cut and extended from the annular base portion thereof. The washer 81 is [fitted] fit to the outer periphery of the shaft 9. Because of the pair of spring arms 81a, the washer 81 can securely contact both the collar 9d and the bearing 5 even if there is a small gap between the collar 9d and the bearing 5.

**IN THE CLAIMS**

The claims have been amended as follows:

1. (Amended) A motor comprising:

a rotor;

an armature coil;

a conductive case for accommodating said rotor;

a member for grounding said conductive case;

a shaft having a portion extending outward from said conductive case;

a bearing fixed to said case for rotatably supporting said shaft;

**APPENDIX**

means, including a conducting member in contact with said shaft and said conductive case, for pressing said conducting member between said shaft and said conductive case.

5. (Amended) The motor as claimed in claim 4, wherein said [ring] disk portion comprises a plurality of slanted spring members.

6. (Amended) The motor as claimed in claim 3, wherein said motor further comprises a noise suppressing circuit having a pair of noise suppressing coils connected in series with said armature coil and a capacitor connected [in parallel with] across said pair of noise suppressing coils.

7. (Amended) The motor as claimed in claim 3, wherein said motor further comprises a noise suppressing circuit having a pair of noise suppressing coils connected in series with said armature coil and a capacitor connected [in parallel with] across said pair of noise suppressing coils.
